**Abstract:** *This article looks into the specifics of teaching in these challenging times, particularly after the outbreak of the Covid pandemics early in 2020 and the lockdown that followed, which forced the general migration of teaching into online. Teaching with the use of technology, already in high demand worldwide, has soared during this period, having its detractors as well as its committed followers. The article looks into recent research on how technology impacts the learning process and how this might develop in the future, influencing teachers, students, campus-based teaching and education in general in the following years. There are obviously minuses and pluses to online teaching and learning; this article will discuss some of them, with practical examples and information from the particular context of higher education teaching in Romania.*

**Key words:** *online teaching; e-learning; education; technology; future*

**JEL Classification:** *A1; A2; A3; Y8*
