Abstract: *Investment determines the sustainability and prosperity of an economy. The paper seeks to (1) give an overview of the roles of companies on the stability of the financial system, based on existing theoretical and empirical work; and (2) to highlight the reasons which expose them to the non-application of their duties against the State. For this purpose, a bibliometric analysis using the Direct Science database was employed. The results of the analysis allowed us to study the search trend by analyzing the distribution of publications, authors, types of publications and fields of research and also showed that the themes of the study are of great scientific interest because of the surge in the number of publications on the role of companies over the last ten years averaging 76.3 per year while 1,690 were on the impact of company behaviour on the stability of the financial system.*

Key words: *entrepreneurship; management; finance; economy; social responsibility; business*
