---

**Abstract:** *Has economic globalization reached its limits? Why does the degree of interdependencies and integration vary so much across countries? What are the main factors that explain the recent trends in globalization? What is the true meaning of the “new globalization”? In fact, how new is the globalization? These are barely the questions we are trying to offer an answer in the context of this article. In this paper we try to extend a debate focused on main characteristics of the new phase of economic globalization, as it started to manifest in multiple areas of the world economy.*

**Key words:** *economic globalization; globalization limits; factors of globalization; technological progress*

**JEL Classification:** *F6; F63; F68*
